```
#include <iostream>
using namespace std;

namespace First
{
   int num = 30;

   void display()
   {
      cout << "Number = " << num << endl;
   }
}

namespace Second
{
   int num = 20;

   void display()
   {
      cout << "Number = " << num << endl;
   }
}

int main()
{
   First::display();
   Second::display();

   return 0;
}
```
